Chapter 1 About EXAMCORE and this manual

EXAMCORE replaces paper files, e-mail attachments and pen drives for question papers. Every paper is set, reviewed, approved and printed inside one secure system. Every step is recorded.

What the system does

- **Question bank.** Each department keeps its questions, tagged by unit, marks, difficulty and Bloom level (K1–K6), with full version history.
- **Blueprints.** A blueprint is the pattern a paper must follow: its sections, how many questions each has, how many candidates answer and the marks for each.
- **Paper builder.** Setters assemble papers from the bank by hand or generate them automatically from the blueprint.
- **Review.** Every paper goes through **moderation** (academic review), then **scrutiny** (technical checks), then **final approval**.
- **Lock and release.** An approved paper is locked as a FINAL version that nobody can change. It is then packaged for printing.
- **Audit trail.** Every sign-in, view, download and decision is recorded in a log that cannot be edited.

How to read this manual

- Use **Show the chapters for my role** above to hide the chapters you don't need.
- **Sidebar items** appear like this; buttons like ; the main button on a screen like ; and fields you fill in like *Submission deadline*.
- Keyboard shortcuts appear as  + . On a Mac, use  Cmd instead of .
- Paper statuses appear as coloured labels, for example , exactly as they look in the system.

NOTE

You only see the menus and buttons your role allows. If this manual describes a screen you can't find, your account doesn't have that role. Ask the Examination Cell.

Chapter 2 **Signing in and securing your account**

Your account gives access to confidential examination material. Protect it the way you would protect the key to the strongroom.

Sign in

- 1 Open the EXAMCORE address given by the Examination Cell in Chrome, Edge, Firefox or Safari.
- 2 In *E-mail or employee ID*, enter your college e-mail address or your employee ID.
- 3 Enter your *Password*. Select the eye icon to check what you typed.
- 4 Tick *Remember this device* only on your own computer, never on a shared or lab machine.
- 5 Select **Sign in**. If two-step verification is on, enter the 6-digit code from your authenticator app.

ACCOUNT LOCKOUT

After several wrong passwords in a row, the account is locked for a while and the screen says how many minutes to wait. The error message never says whether the e-mail or the password was wrong; this protects accounts from guessing. If you are locked out urgently, an administrator can unlock you.

Forgotten password

- 1 On the sign-in screen, select **Forgot password?**
- 2 Enter your e-mail address or employee ID. A reset link is sent to your registered e-mail address.
- 3 Open the link **within 30 minutes** and choose a new password. Signing in again is required on every device.

Turn on two-step verification

Two-step verification (also called MFA) asks for a 6-digit code from your phone after your password. It stops someone who learns your password from getting in. The college can make it compulsory for certain roles. If it is compulsory for yours, a banner appears and you can't open papers until you turn it on.

- 1 Install an authenticator app on your phone: Google Authenticator, Microsoft Authenticator or similar.
- 2 Select your initials in the top-right corner, then **Profile**.
- 3 Select **Set up two-step verification** and **scan the QR code** with the app.
- 4 Enter the **6-digit code** the app shows, then select **Verify & enable**.

TIP

If you change or lose your phone, ask an administrator to **reset two-step verification** on your account, then set it up again on the new phone.

Change your password and check your devices

- In **Profile**, change your password using *Current password*, *New password* and *Confirm new password*, then select **Update password**. If the new password breaks a rule, the screen says which one.
- The same page lists every device currently signed in to your account, marked **This device** for the one you are using. Sign out any device you don't recognise, then change your password.
- Always sign out from the menu under your initials when you finish on a shared computer.

Chapter 3 Finding your way around

Main screen layout

SIDEBAR (LEFT)

- Overview
- Examinations
- Paper setting
- Review
- Academics
- Insight
- System

TOP BAR

- Search box (**Ctrl** + **K**)
- Light / dark theme button
- Notification bell with unread count
- Your initials: profile and sign-out

MAIN AREA

- The page you opened
- Lists, forms and workspaces
- Numbers beside sidebar items show work waiting for you

Sidebar groups

GROUP	ITEMS (YOU SEE ONLY THOSE YOUR ROLE ALLOWS)
Overview	Dashboard , Notifications
Examinations	Sessions , Examinations , Calendar , Status board
Paper setting	My assignments , Question papers , Question bank , Taxonomy , Usage history , Blueprints , Paper setters
Review	Moderation , Scrutiny , Approvals , Packaging , Archive
Academics	Courses , Programs & departments
Insight	Reports , Analytics , Audit logs
System	Templates & branding , Administration

Search and quick commands

Press **Ctrl** + **K** anywhere, or select the search box in the top bar. Type part of a paper code, a course code, a question or a person's name. The results are grouped, and the **Create** and **Go to** groups let you jump straight to a page or start something new. Use the arrow keys and **Enter** to choose.

Dashboard and notifications

- The [Dashboard](#) shows what needs you today: assignments and their deadlines for setters, papers waiting for review for moderators and approvers, and the session's progress for the Controller.
- The bell shows new notifications, such as a new assignment, a paper returned to you, or a deadline coming up. Select one to go straight to the item. Notifications never contain paper content, only a link to it.

- Deadline reminders arrive a few days before a deadline (the college sets how many), and again if the deadline passes.

Chapter 4 How a paper moves through the system

Every paper follows the same route. Knowing it tells you where a paper is and who has to act next.

Status labels

STATUS	MEANING	WHO ACTS NEXT
Draft	The setter is still working on the paper.	Setter
Submitted	Sent for review; the setter can no longer edit it.	Moderator
Under moderation	The moderator is reviewing it.	Moderator
Revision required	Sent back with remarks. It can be edited again.	Setter
Resubmitted	The corrected paper is back with the moderator.	Moderator

STATUS	MEANING	WHO ACTS NEXT
Under scrutiny	Technical checks of marks, numbering, formatting and more.	Scrutiny officer
Awaiting approval	Waiting for the final decision.	Controller / approver
Approved	Approved, and waiting to be locked by the Controller.	Controller
Locked	FINAL version. Nobody can change it.	Controller / examination cell
Released	Handed over for printing.	—
Archived	Kept for the record after the examination.	—
Rejected	Not accepted. A new paper or a reopened revision is needed.	Controller

Versions

- Submitting creates **version 1.0**. Each later round of moderation or resubmission adds 1.1, 1.2 and so on.
- Locking creates a **FINAL** version, for example **2.0 FINAL**. Only the FINAL version is ever printed.
- On a paper's page, **Compare** shows exactly what changed between any two versions.

SEPARATION OF DUTIES

Nobody can review their own paper. A setter cannot moderate, scrutinise or approve a paper they set. Only the moderator appointed for a paper can moderate it.

Chapter 5 Adding questions to the question bank

Paper setters

Heads of department

A well-tagged bank makes papers faster to build and fairer, because the blueprint checks rely on the tags.

Create a question

- 1 Go to **Question bank** and select **New question**, or press **Ctrl** + **K** and choose it from **Create**.
- 2 Choose the *Course* and the *Unit*. Add a *Topic* and a *Learning outcome* if they apply.
- 3 Choose the *Question type*, the *Bloom level*, the *Difficulty*, the *Marks* and the estimated time (*Est. minutes*).
- 4 Write the *Question text*. The **Preview** panel shows exactly how it will print.
- 5 For multiple choice, true/false, assertion/reason and match-the-following questions, fill in the choices or pairs that appear.
- 6 Add *Keywords* (for example *stack*, *postfix*, *evaluation*) and *Tags* (for example *numerical*, *previous-year*) to make it easy to find.
- 7 Select **Create question**. A question you create is marked **Pending review** until your head of department approves it.

Formatting the question text

Use the toolbar above the text box, or type the formatting directly.

YOU WANT	TOOLBAR BUTTON	OR TYPE		
Maths inside a sentence	Equation	$x^2 + y^2$		
Maths on its own line	Block maths	$\int_0^1 x \, dx$		
A table	Table	<table><tr><td>Column A</td><td>Column B</td></tr></table>	Column A	Column B
Column A	Column B			
Program code	Code	Three back-ticks before and after the code		
A diagram or figure	Image	Upload a PNG, JPG, WebP or GIF file		
Bold / italic	—	**bold** , <i>*italic*</i>		

YOU WANT	TOOLBAR BUTTON	OR TYPE
A list	—	Start lines with - or 1.

COMMON MISTAKES

Every \$ needs a matching closing \$. A broken equation is refused when you save, and scrutiny rejects it later too. Never put the answer in the question text (for example "Ans: ..."): scrutiny flags it as a confidentiality risk.

Editing and duplicates

- **Edit** never overwrites a question. It creates a new version. Fill in *Change note for this version* (for example *Corrected data in part (b)*).
- **Duplicate check** on a question's page lists similar questions already in the bank, so the bank doesn't fill up with near-copies.
- **Usage history** shows which papers and sessions used each question. Recently used questions are held back from new papers for a cool-off period that the college sets.

Finding questions

The search box understands words and phrases and tolerates small spelling mistakes. Narrow the results by course, unit, marks, difficulty, Bloom level, type, tag, usage and status. To keep a combination of filters you use often, select **Saved filters** → **Save current filters**.

Chapter 6 Setting a question paper

Paper setters

From accepting the assignment to submitting a paper that meets the blueprint.

Accept or decline the assignment

- 1 When you are appointed, you get a notification. Open **My assignments**.
- 2 Read the course, the examination, the **submission deadline** and any instructions from the Examination Cell.
- 3 Select **Accept**. Your paper workspace is created immediately.
- 4 If you can't set this paper, select **Decline** and give a reason (for example *On leave during the setting period*). The Controller is told, so that a backup setter can be appointed.

The paper builder

Select **Open builder** on the assignment. The builder has three panels. The side panels can be hidden to give the paper more room.

Paper builder		
QUESTION BANK • Search (press /) • Filter by unit, marks, difficulty, Bloom level • Add a question, or drag it across • Questions already used show In paper	YOUR PAPER • General instructions to candidates • Sections (A, B, C...) with their instructions • Questions in order; drag to reorder • Move to another section, or remove	BLUEPRINT COMPLIANCE • Marks per section • Unit weightage • Difficulty mix • Bloom's taxonomy mix • Syllabus coverage and duplication

Option A: generate the paper automatically

- 1 Select **Generate**. The **Paper generation rules** window opens.
- 2 Under **Sections to generate**, choose which sections to fill. You can keep sections you've already built by hand.
- 3 Check the **Question bank capacity** table. It shows, for each section, how many questions are needed and how many suitable fresh ones exist.
- 4 Leave *Allow recently used questions* off unless the bank is too small.

- 5 Review the proposed paper and the **Marks validation**. Select **Regenerate** for a different selection.
- 6 Select **Apply to paper**. Nothing changes until you apply.

NOTE

If the bank doesn't have enough suitable questions, the generator tells you which slots it couldn't fill and leaves them empty for you. It never quietly produces a short paper.

Option B: build it by hand

- 1 Search the bank panel. Press **/** to jump to the search box.
- 2 Drag a question onto a section (**Drop questions here**), or select **Add** and choose **Add to section**.
- 3 Drag questions to reorder them. Use **Move to** to put a question in a different section.
- 4 Use **Edit section** to change a section's label, title, instructions or *Marks per question*.
- 5 Fill in *General instructions to candidates* (for example *Answer the questions as directed in each section*).
- 6 Keep an eye on **Blueprint compliance** on the right. Everything should be green before you submit.

Save, preview and submit

- 1 Press **Ctrl** + **S** to save. The builder shows **Saved** with the time. Save often.
- 2 Open **Preview** to see the paper exactly as it will print, with a DRAFT watermark.
- 3 When the paper is complete, press **Ctrl** + **Enter**, or use the submit button. The **Submit paper for moderation** window opens.
- 4 Confirm with **Submit**. The paper becomes **Submitted** (version 1.0) and you can no longer edit it.

PAPER UPDATED ELSEWHERE

If the paper was changed in another browser tab or on another computer, the builder warns you instead of overwriting the other changes. Choose **Review changes** to load the latest version, or **Keep editing** to continue and decide later.

When a paper comes back to you

- 1 A notification tells you the paper is **Revision required**.
- 2 Open the paper and read the moderation or scrutiny remarks. Remarks are attached to specific questions and to the paper as a whole.
- 3 Open the builder, make the corrections and save.
- 4 Submit again. The window now says **Resubmit paper**. The paper goes back to the moderator as **Resubmitted**.

PRACTICE EXERCISE · ABOUT 20 MINUTES

1. Create two questions in your course: a 2-mark K1 short answer and a 10-mark K3 problem with an equation.
2. Accept the training assignment and open the builder.
3. Generate the paper, look at the capacity table, then regenerate once.
4. Swap one generated question for one of yours, then save with **Ctrl** + **S**.
5. Preview, then submit with **Ctrl** + **Enter**. Check that version 1.0 appears on the paper page.

Chapter 7 Head of department tasks

Heads of department

Keep your department's question bank sound, define paper patterns, and recommend setters.

Review new questions

- 1 In **Question bank**, set the status filter to **Pending review**.
- 2 Open each question. Check its content and its tags (unit, marks, Bloom level, difficulty), and run **Duplicate check**.
- 3 Select **Approve into bank**. Only approved questions can be used in papers.
- 4 Select **Retire** on questions that are out of date. They stay in past papers but can't be used in new ones. **Restore** brings them back.

Blueprints (paper patterns)

- 1 Open **Blueprints** and create or edit one.
- 2 Give it a *Name*, choose what it *Applies to*, and set the *Duration (minutes)*.
- 3 Add a row per section. *Label* is the section letter (A, B, C). Also give the *Heading*, the *Instructions printed under the heading*, *Questions set*, how many candidates must answer (*To answer*) and *Marks each*.
- 4 Save. The total marks are calculated from what candidates answer, not from how many questions are set.

EXAMPLE

Section A: 10 questions set, 10 to answer, 2 marks each = 20. Section B: 7 set, 5 to answer, 6 marks each = 30. Section C: 5 set, 3 to answer, 10 marks each = 30. Total 80 marks.

Recommend paper setters

- 1 Open **Paper setters**. The **Needs a setter** tab lists examinations without one.
- 2 Select **Recommend setter**, choose the *Faculty member*, and add a reason.
- 3 Your recommendation goes to the Examination Cell. **The Controller makes the final appointment.**

The **Workload** tab shows how many papers each faculty member already has, so the work can be spread fairly. **Taxonomy** shows how your bank is spread across units, difficulty and Bloom levels. Use it to find gaps before the setting season.

Chapter 8 Moderating a paper

Moderators, including external moderators

Check that the paper is academically sound, fair and within the syllabus, then approve it, send it back or reject it.

- 1 Open **Moderation**. The number beside it shows papers waiting for you.
- 2 On the paper's row, select **Review**. The banner reads **Ready for moderation**.
- 3 Select **Start moderation**. The paper becomes **Under moderation** and the tools switch on.
- 4 Read every question. Use **Original paper** to see the setter's version beside any changes you make.
- 5 To comment on a question, select **Remark**, choose the type (**Comment**, **Issue** or **Suggest replacement**), write it, and select **Add remark**.
- 6 To swap a question yourself, select **Replace**. Choose from the suitable candidates (same unit and marks), use **Search replacements** if needed, and give a reason (for example *Ambiguous wording; repeated from April 2026*). The replacement is recorded.
- 7 Tick all six points of the checklist in the **Validation** panel.
- 8 Write your overall assessment under **Moderation remarks**.
- 9 Choose a decision, described below.

The moderation checklist

CHECK	CONFIRM THAT...
Question relevance	Every question is within the prescribed syllabus
No ambiguity	The wording admits a single interpretation
Language & grammar	The English is clear and correct
Formatting	Numbering, symbols and tables are correct
Learning outcomes	Questions map to the stated course outcomes
Difficulty appropriate	The paper suits the semester and programme

Your decision

BUTTON	WHEN TO USE IT	WHAT HAPPENS
Approve & send to scrutiny	The paper is acceptable, with or without your replacements. Available only when all six checks are ticked.	A new minor version is saved and the paper goes to Under scrutiny .
Request modification	The setter must fix things. Moderation remarks are required.	The paper returns to the setter as Revision required .
Reject paper	The paper cannot be saved by corrections. Remarks are required.	The Controller and the setter are told; a new paper is needed.

NOTE

You can only moderate papers you were appointed to. Your remarks, replacements and decision are all recorded against your name in the audit log.

Chapter 9 Scrutiny

Scrutiny officers

A final technical check before approval. The system runs the checks; you confirm them and decide.

- 1 Open **Scrutiny** and select **Scrutinise** on the paper's row.
- 2 Read the **Automatic checks** list. Each check is marked as passed, a blocker, or an advisory warning.
- 3 The verdict at the top reads **READY FOR APPROVAL**, or states how many blockers remain.
- 4 Read the paper preview yourself as well. The checks cannot judge everything.
- 5 If the paper was corrected while it was open, select **Re-run** to check again.
- 6 Decide: **Pass scrutiny** (available only when there are no blockers), or write your **Scrutiny remarks** and select **Return for correction**.

What the automatic checks look at

CHECK	PASSES WHEN
Course code, title, duration, maximum marks	They match the examination record exactly
Question count and section totals	Every section matches the blueprint
Total marks	Marks candidates can score equal the maximum marks
Missing questions, section and question numbering	No empty sections, repeated labels or repeated questions
Marks allocation	Every question in a section carries that section's marks
Instructions and header	Candidate instructions, institution name and session are present
Special characters	No invisible or corrupted characters
Equation rendering	Every equation displays correctly
Images	Every referenced diagram exists

CHECK	PASSES WHEN
Answer choices	Multiple-choice options are complete and distinct
Confidentiality	No setter name or answer text in the paper, and a watermark policy is active
University branding (warning only)	Logo and institution name are configured

Chapter 10 Final approval and locking

Controller of Examinations

Deputy controller

Approver (Dean)

The last decision. Once a paper is locked, its FINAL version can never be changed, so read it as it will print.

1

Open **Approvals** and select **Review** on the paper.

2

Check that the summary reads **READY FOR FINAL APPROVAL**. Read the moderation and scrutiny remarks, then the paper itself.

3

Decide:

- **Approve & lock** (Controller). Confirm in the window. The paper becomes **Locked** and a FINAL version is created.
- **Approve** (Approver without locking rights). The paper becomes **Approved**, and the Controller then selects **Lock paper**.
- **Return for revision** sends it back to the setter; the reason is required. It goes through moderation and scrutiny again.
- **Reject**. The reason is required.

4

After locking, the screen shows **PAPER LOCKED** and the new FINAL version number. The **Final PDF** is now available.

IMPORTANT

Locking also records which questions were used in this session, so they are held back from the next sessions. If a locked paper must change, the Controller reopens it for revision with a written reason. This is recorded, and the paper goes through the full review again.

The college may require two-step verification before anyone can approve a paper. If so, set it up first (Chapter 2).

Chapter 11 Running an examination session

Controller

Examination cell

Setting up a session, appointing setters, tracking progress and preparing papers for printing.

Create the session

- 1 Open **Sessions** and select **New session**.
- 2 Fill in *Session name* (for example *November 2026 End Semester Examinations*), *Code*, *Academic year*, *Term* (odd or even semesters) and *Examination type*.
- 3 Choose the *Applicable programmes*.
- 4 Set the **Workflow deadlines**: paper setting, moderation, scrutiny and approval. Reminders are based on these dates.
- 5 Save. Open the session to see its examinations, and to move it through its phases, such as **Paper setting**, **Moderation** and **Scrutiny**.

Appoint setters

- 1 Open **Paper setters**. Check **Needs a setter** and any recommendations from heads of department.
- 2 Select **Appoint setter**. Choose the *Examination*, the *Setter*, an optional *Backup setter* and the *Submission deadline*, and add *Instructions to the setter*.
- 3 The setter is notified at once. On the **Assignments** tab you can later use **Change deadline** or **Withdraw assignment** (a draft paper is kept for the audit trail).
- 4 Use the **Deadlines** tab to follow up late setters, and **Workload** to spread the work fairly.

Track progress

- **Status board** shows every examination and the stage its paper has reached.
- **Calendar** shows examination dates and workflow deadlines.
- The **Dashboard** shows the session's completion and the upcoming deadlines.

Package papers for printing

- 1 Open **Packaging**. Only **Locked** papers are listed.

2

Select the papers, filtering by session if needed.

3

Choose a **Package format**:

- **Printing package**: a ZIP with individual PDFs, one combined batch PDF, a manifest and printing instructions.
- **Individual PDFs**: a ZIP with one PDF per paper and a manifest.
- **Batch PDF**: a single merged PDF in examination-date order.

4

Select **Download package**. Every PDF carries your name and the time as a watermark, and the download is logged.

5

After handing over, mark each paper **Release to printing** from the paper's page, and archive it after the examination.

HANDLING DOWNLOADED PAPERS

The manifest lists a fingerprint (SHA-256) for every PDF, so the press can confirm that nothing was altered. Download packages only on examination cell computers, keep them off USB drives and e-mail, and delete local copies once printing is confirmed.

Chapter 12 Reports, analytics and the audit log

Controller

Examination cell

Heads of department

Auditors

Reports

Open [Reports](#) and choose a tab: **Examination status**, **Setter report**, **Question bank**, **Moderation** and, for auditors and the Controller, **Audit & access**. Choose a session and select [Show](#). Each report can be exported as CSV, Excel or PDF for meetings and records.

Analytics

[Analytics](#) shows trends: how many papers are complete, average time to submit, moderation turnaround, question reuse, question bank growth and overdue assignments. Use it after each session to plan the next one.

Audit logs

- 1 Open [Audit logs](#). Filter by category and date range, or search by user, action, network address or record.
- 2 Each entry shows who did what, when, from which network address, and to which record.
- 3 Select [Verify integrity](#) to check that no entry has been altered or removed. A healthy log reports that the chain is intact.
- 4 Select [Export CSV](#) to keep a copy for an inquiry or an external audit.

NOTE

Nobody, including administrators, can edit or delete audit entries. The database itself refuses such changes.

Chapter 13 Administration

System administrators

User accounts, roles and college-wide settings. Administrators manage the system but cannot read question papers or questions. This is deliberate.

Open **Administration**. It has six tabs.

TAB	WHAT YOU DO THERE
Users	Add staff, give them roles (scoped to a department where relevant) and manage accounts. On a user's page: Suspend account , Reactivate account , Unlock account , Reset two-step verification , Send password-set link , Sign out all devices .
Roles & permissions	See exactly what each role may do, and adjust custom roles.
Institution & branding	College name, logo and address as printed on papers.
Security	Password rules (length and character types, maximum age), <i>Failed sign-ins before lockout</i> , <i>Lockout duration</i> , <i>Idle session timeout</i> , <i>Maximum session length</i> , the “Remember this device” duration, and <i>Roles that must use two-step verification</i> .
Examination rules	<i>Question reuse cool-off</i> , <i>Duplicate similarity threshold</i> , <i>Deadline reminder lead time</i> , whether two-step verification is needed to approve papers, whether moderators may change examination details, and whether setters may approve their own papers (keep this off).
Backup	Export or restore configuration: roles, settings, templates, academic structure and blueprints. Examination content is never exported through the browser. Database backups are done by IT on the server.

Templates & branding controls the paper layout, headers and watermark wording.

RECOMMENDED SETTINGS

Require two-step verification at least for the Controller, deputy controllers, approvers, administrators and moderators. Keep “Allow setters to approve their own papers” turned off. Review the Users list at the start of each term and suspend accounts of staff who have left.

Chapter 14 Confidentiality rules for everyone

The system is built to keep papers secret. These habits keep it that way.

DO	DON'T
Work on papers only inside EXAMCORE	Copy questions into Word files, e-mails or WhatsApp
Lock your screen (Win + L) whenever you step away	Leave a paper open on a shared or lab computer
Sign out on computers that aren't yours	Tick “Remember this device” on shared machines
Keep your password and authenticator codes to yourself	Let a colleague or assistant use your account
Report a lost phone or a suspected leak to the Examination Cell at once	Photograph, screenshot or print draft papers

Every PDF shows the name of the person who downloaded it and the time. Every view and download is logged. A leaked copy can be traced to its source.

Chapter 15 Troubleshooting and questions

- I see “Access restricted”.

Your role doesn't include that page. If you need it for your work, ask the Examination Cell to add the role to your account. For department roles, it must be added for the right department.

- My account is locked.

Wait the number of minutes shown and try again carefully. If it is urgent, ask an administrator to select **Unlock account**. If you didn't cause the lockout yourself, change your password afterwards.

- I've lost the phone with my authenticator app.

Ask an administrator to **Reset two-step verification**. Sign in with your password and set it up again on your new phone (Chapter 2).

- The Submit button won't work, or submitting fails.

Save first with `Ctrl` + `S` and wait for **Saved**. Then check the Blueprint compliance panel: every section needs its questions, and the marks must add up. If the builder says the paper was updated elsewhere, choose **Review changes** first.

- The generator left some slots empty.

The bank doesn't have enough fresh, suitable questions for that section. Add questions to the bank (Chapter 5), fill the slots by hand, or, if the Examination Cell agrees, tick “Allow recently used questions”.

- An equation shows as an error.

Check that every $\$$ has a partner, and that commands are spelt correctly (for example $\frac{a}{b}$). The preview shows the error as you type.

- I didn't receive an e-mail (reset link or notification).

Check your spam folder. All notifications also appear under the bell in EXAMCORE. If reset e-mails never arrive, ask the Examination Cell to check your registered e-mail address.

- **A paper I approved needs a correction.**

Only the Controller can reopen an approved or rejected paper for revision, with a written reason. The corrected paper then goes through moderation and scrutiny again. Locked FINAL versions are never overwritten; a correction always produces a new version.

- **A PDF takes a long time to appear.**

Papers are rendered on the server, which takes a few seconds each and longer for batch packages. Don't select the button again; wait for the download to start.

Chapter 16 Quick reference

Keyboard shortcuts

KEYS	WHERE	DOES
Ctrl + K	Anywhere	Search and quick commands
/	Paper builder	Jump to the question bank search
Ctrl + S	Paper builder	Save the paper
Ctrl + Enter	Paper builder	Submit (or resubmit) the paper
Esc	Paper builder, windows	Cancel replacing a question; close a window

Bloom levels

K-LEVEL	BLOOM LEVEL	TYPICAL QUESTION VERBS
K1	Remember	define, list, state, name
K2	Understand	explain, describe, summarise, classify
K3	Apply	solve, compute, demonstrate, use
K4	Analyze	compare, differentiate, examine, derive
K5	Evaluate	justify, assess, critique, recommend
K6	Create	design, formulate, construct, propose

Question types

Multiple choice · True / False · Fill in the blank · Very short answer · Short answer · Descriptive · Essay · Case study · Problem solving · Numerical · Assertion / Reason · Match the following. Difficulty is Easy, Moderate or Hard.

Chapter 17 For department trainers: running the training

One trainer in each department trains colleagues using this manual. The plan below fits three short sessions.

USE THE TRAINING COPY, NEVER THE LIVE SYSTEM

Run all practice on the **training copy** of EXAMCORE provided by IT, which holds sample courses and sample papers. Practice papers must never be created in the live system, where every action is permanently audited.

SESSION	WHO ATTENDS	DURATION	COVERS	HANDS-ON
1 · Basics	All faculty	45 min	Chapters 1–4 and 14: signing in, two-step verification, navigation, the workflow, confidentiality	Everyone signs in and turns on two-step verification
2 · Setting papers	All faculty	90 min	Chapters 5–6: the question bank, the builder, generating, submitting, revisions	The exercise at the end of Chapter 6
3 · Reviewing	HoDs, moderators, scrutiny, exam cell	60 min	Chapters 7–12, by role	Moderate and scrutinise a practice paper end to end

Checklist before faculty set live papers

- Everyone in the department can sign in and has two-step verification switched on.
- Every participant has created at least one question and submitted a practice paper.
- The department's blueprints are entered and checked by the head of department.
- The department's question bank has enough approved questions per unit. Check [Taxonomy](#).
- Everyone knows whom to contact for access problems (the Examination Cell) and for technical faults (IT).

EXAMCORE training manual, version 1.0 (September 2026). Screen and button names match EXAMCORE 1.0; if the college changes settings such as reminder timing or which roles need two-step verification, the behaviour described may differ slightly.
